Abstract (en)  
The invention improves the safety of a flavor inhaler. Provided is a flavor inhaler capable of heating a smokable substance contained in consumable. The flavor inhaler comprises a tubular receiving member in which the consumable is inserted; a heating element configured to heat the smokable substance from inside; a tubular portion surrounding the outer periphery of the receiving member, configured not to move in the direction that the consumable is inserted, and configured to be rotatable around the receiving member in a circumferential direction; a supporting portion configured to support the receiving member in such a manner that the receiving member is movable in the direction that the consumable is inserted; a spiral guide formed in either one of the receiving member and the tubular portion; and a first engaging portion formed in the receiving member or the tubular portion, whichever the spiral guide is not formed in, the first engaging portion being configured to be engaged with the spiral guide.
