Abstract (en)

[origin: WO2022139669A1] Seating device (1000) for assisting an individual in a seating furniture is provided. The seating device comprises a base part (100); a seating part (200) pivotably connected to the base part (100); a biasing arrangement (300) acting between the base part (100) and the seating part (200) and biasing the seating part (200) towards a raised lifting position; a locking arrangement (400) comprising a stopping member (401) pivotably connected to one of the base part (100) and the seating part (200). The locking arrangement (400) is configured to be set between a released position and a locked position, in which locked position the stopping member (401) engages a locking portion (205) of the other of the base part (100 and the seating part (200)), thereby maintaining the seating part (200) in a lowered seating position. A maneuvering arrangement (500) is provided to pivot the stopping member (401), thereby setting the locking arrangement (400) from the locked position to the released position.
