Abstract (en)

[origin: WO2022128771A1] The invention relates to an individually portable fan-assisted apparatus (1) comprising: - an annular main body (2) suitable for being worn around the neck or the head, including a front central element (3) comprising an air inlet (10), a fan and an air outlet, and two retaining branches (4) for retaining the main body in position; - an air distribution element (15) including an air distribution outlet (16) configured so as to blow a flow of air from the fan towards the respiratory tracts of a user, to face towards and remain at a distance from the respiratory tracts, and centered on an axis within a median sagittal plane (Ps) of the user, the air distribution element being removably assembled with the front central element so as to provide aeraulic communication between the air outlet of the front central element and the air distribution outlet.
