Abstract (en)
[origin: WO2022136203A1] The invention relates to a manufacturing cell for producing a three-dimensionally deformable wood veneer, comprising - a receiving surface (4) for receiving a wood veneer (6) to be processed, and - a device (8) for partly or completely separating the wood veneer in order to form a plurality of veneer strands (10), wherein the invention is characterized by - a device (12) for pressing the wood veneer (6) to be processed and the veneer strands (10) against the receiving surface (4), and the device (12, 18) is designed to generate a pressure difference between a first side (14) and a second side (16) of the wood veneer (6) to be processed and the veneer strands (10).
