Abstract (en)
[origin: WO2022129497A1] The invention relates to a method for producing coated chipboard (9) having a functional surface, wherein, in a first step (S1), both sides of the chipboard (9) are covered continuously and simultaneously with melamine-impregnated paper (90) and a functional backing material (91), the melamine-impregnated paper (90) and the functional backing material (91) being applied continuously and simultaneously to the chipboard (9) from two rolls (10) and (11) in each case. The invention also relates to a system for carrying out the above method and for producing a coated chipboard (9), the system having a suitable device (1) for unrolling the functional backing material and the paper, a cutting device (2), a suitable press (3) and a suitable functional backing material removal device (4) for operating the system continuously and carrying out the method continuously.
