Abstract (en)

[origin: WO2022128363A1] The invention relates to a separating device (1) for regionally separating a film web (2), having an anvil plate (6) which has a working surface (19) for laying an end region (14) of a film web (2), having a conveying device (7) which is mounted along a conveying axis (17) so as to be linearly movable with respect to the anvil plate (6) and which is designed to carry out a laying movement, oriented parallel to the working surface (19), for the end region (14) of the film web (2), having a separating device (8) which has at least one cutting edge (52, 53) for carrying out a separating operation for an end region (14), held between the cutting edge (52, 53) and the working surface (19), of the film web (14), wherein the conveying device (7) and the separating device (8) are designed to alternately carry out the laying movement and the separating operation for the end region (14) of the film web (2).
