Abstract (en)
[origin: WO2022126164A1] The invention relates to a furniture fitting to support at least one door leaf (2), in particular at least two door leaves (2, 3) connected to one another in a hinged manner, on a fixed wall. The at least one door leaf (2) is movable between an open position and a closed position (4) in which the at least one door leaf (2) can be positioned substantially transversely with respect to the wall. The furniture fitting (1) has a first fitting part (5), preferably in the form of a hinge cup, which can be fastened on and/or in the wall, and a second fitting part (6) which can be attached to the at least one door leaf (2). In the closed position (4) of the at least one door leaf (2) the two fitting parts (5, 6) can be connected to one another, and in the open position of the at least one door leaf (2) they can be separated from one another. The two fitting parts (5, 6) each have at least one support element (7, 8), and the support elements (7, 8) of the two fitting parts (5, 6) can be brought into abutment against one another by a movement, preferably a pivoting movement, of the at least one door leaf (2) into the closed position (4) in such a way that in the closed position (4) of the at least one door leaf (2) the two fitting parts (5, 6) can be supported against one another at least in a transverse direction with respect to the at least one door leaf (2).
