Abstract (en)
[origin: WO2022129426A1] The invention relates to a motor-vehicle lighting module (2), comprising a first lighting sub-module (5) comprising a light source (6.3) able to form a first light beam; a second lighting sub-module (10) able to form a second light beam; a second projection lens (12) for projecting the second light beam, contiguous to a first projection lens (8); and an optical device (18) configured to redirect to the second projection lens (12) light rays that originate directly from the light source (6.3) of the first lighting sub-module (5) and that pass in front of the reflective surface (6.2) of the first lighting module (5), so as to make said second projection lens (12) appear illuminated even when the second lighting sub-module (10) is turned off.
