Abstract (en)

[origin: WO2022128223A1] The invention relates to a compensation assembly (70) for use in a hot water device (1), in particular in a hot water storage tank for domestic use, and an associated hot water device (1), the hot water device (1) comprising a water tank (10) for holding water to be heated, and the compensation assembly (70) comprising a compensation vessel and a ventilation component (80) which allows air to be exchanged between the compensation vessel and the atmosphere. The ventilation component (80) includes a blocking element, in particular a swell plate and/or a ball valve, said blocking element being designed to prevent water from leaking from the compensation vessel via the ventilation component (80).
