Abstract (en)
[origin: WO2022128135A1] A method according to an example of the present disclosure includes recording, by a computing device in a first vehicle and for each of a plurality of time periods, tachograph data that describes operation of the first vehicle during the time period in a private data set and a separate public data set that is different from the private data set. The method includes, based on the first vehicle being within a V2V communication range of a second vehicle, using V2V signaling to transmit one or more of the public data sets to the second vehicle and receive one or more public data sets from the second vehicle containing tachograph data that describes operation of the second vehicle. The method includes the computing device uploading the private data sets of the first vehicle and the one or more public sets from the second vehicle to a server for further analysis.
