Abstract (en)
The invention relates to a washing machine (1) comprising a housing (11) for enclosing a drum (13) rotatably disposed for receiving items, characterized in that the drum (13) is supported by a drum support member (14) comprising pluralities of arm parts (141) extending away from a hub (142) for receiving a drive shaft (15) with a head (151). As an improvement, the hub (142) further comprises a recessed part (1421) forming a perforated surface (1422) and the head (151) of the drive shaft (15) comprises a protrusion (1511) forming a protruding surface (1512) for combining to the hub (142).
