Abstract (en)
Control mechanism (1) for a combustion appliance (2), in particular a gas boiler, the combustion appliance (2) having a fuel gas supply line (3), the control mechanism comprising a gas sensor (4) placeable in the fuel gas supply line (3) for measuring a physical characteristic of a gas flowing in the fuel gas supply line (3), and a control unit (5) to control the operation of the combustion appliance (2), the control unit (5) being connected to the gas sensor (4) to acquire sensor data from the gas sensor (4), wherein the control unit (5) is configured to control the operation of the combustion appliance (2) after determining the gas type flowing in the fuel gas supply line (3) based on sensor data.
