Abstract (en)
The present invention relates to a method for transporting thermal energy in a storage medium via a sea route, the method comprising the following steps in the given order a) receiving solar energy; b) converting the received solar energy to thermal energy using a first conversion station; c) storing the thermal energy in a storage medium by heating the storage medium; d) placing the heated storage medium in one or more containers comprised by a movable unit and moving the movable unit from a first location to a second location via a sea route; e) at the second location, converting the thermal energy in the heated storage medium to electrical energy using a second conversion station or supplying the thermal energy in the heated storage medium to a user.
