Abstract (en)
[origin: WO2022136592A1] The invention relates to a support system for growing plants, in particular salad plants, for automated plant growing with optimised watering. According to the invention, the support system has at least one watering means for continuous conveyance of a liquid from a first interstice between a well-shaped container and a substrate support inserted into the support system, wherein the watering means projects with one end into the first interstice and with the other end through a bottom opening in the substrate support into same.
