Abstract (en)
[origin: WO2022135691A1] The invention relates to a pneumatic device (10) comprising modules (100), each module having compressed air supply valves (12), the intensity of the compressed air jet supplied by each module (100) being variable according to the combination of valves (12) activated, and outlet nozzles (14) of one or more air jets coming from the modules (100), according to the number of modules (100) activated, the nozzles having aligned outlet orifices. The invention also relates to an object sorting system comprising the pneumatic device.
