Abstract (en)
[origin: WO2022136322A1] The invention relates to a method for sterilising an interior (11) of a packaging (5), wherein: - the packaging (5) has an upper film (3) and a lower part (1); - the upper film (3) and the lower part (1) in the closed state of the packaging (5) delimit the interior (11) at least in some regions; - a sterilising substance (15) is applied to a first surface (13) of the upper film (3); - the sterilising substance (15) contains iodine; - the upper film (3) is arranged on the lower part (1) in such a way that the first surface (13) of the upper film (3) faces the interior (11) of the packaging (5) at least in some regions; - the sterilising substance (15) is arranged within the packaging (5) and is activated from outside for a predetermined activation time period; and - an initial germ load within the packaging (5), in particular in the interior (11) of the packaging (5), is preferably reduced by a factor of at least 106.
