Abstract (en)  
[origin: CA3203231A1] The invention relates to a container for transporting volatile powders and comprising a hermetically sealed chamber of tubular shape with circular cross section about an axis, a suction duct (66) configured to extract the volatile powder placed in the hermetically sealed chamber, the suction duct (66) opening into the hermetically sealed chamber (50) by means of a pipe (70) mobile in terms of rotation about the axis and mobile in terms of translation along the axis, the pipe (70) comprising a first tube (72) extending along the axis and a second tube (74) extending radially with respect to the axis, the first tube (72) and the second tube (74) each comprising an internal channel (72a, 74a) communicating with the suction duct (66), the second tube (74) having at least one opening which opens into the hermetically sealed chamber and which communicates with the internal channel (74a) thereof, the opening allowing the extraction of the powder situated inside the hermetically sealed chamber.
