Abstract (en)

[origin: WO2022136531A2] The invention relates to a handling device for pharmaceutical containers (14), for example vials, syringes, cartridges or ampoules, said handling device comprising: two or more holding elements (114), by means of each of which a container (14) can be gripped and at least one holding element (114) of which can be selectively moved back and forth along a direction of movement (132); and a distance changing means (150) for transferring the holding elements (114) from a first relative position to a second relative position and vice versa, in which second relative position the holding elements (114) are at a distance (166, 168) from one another which differs from the distance (166, 168) in the first relative position. The invention also relates to a processing system for pharmaceutical containers.
