Abstract (en)
[origin: WO2022137101A1] A fitting device (100) to a plastic pipe of a fluidic system is described comprising: a fitting body (1) having a coupling portion (2) to a component of the system and a tubular portion (3) configured to house an end of the plastic piping (4). The fitting body (1) being obtained in one piece or obtained by a connection between the coupling portion (2) and the tubular portion (3) of a permanent type. The device further comprises a sleeve element (14) disposed in the tubular portion (3) and configured to be surrounded by the end of the plastic tubing (4) when inserted into the tubular portion (3). The tubular portion (3) of the fitting body (1) is plastically deformable so as to reduce, under the action of compression, its radial extension and compress the plastic tube end (4) onto the sleeve element (14)
