Abstract (en)	[origin: WO2023174809A1] A weapon system (22) comprising an interrupter unit (36), a first weapon (22a) and a second weapon (22b) is disclosed. The first weapon (22a) is designed to fire first ammunition within a first corridor (24). The second weapon (22b) is designed to fire second ammunition within a second corridor (26), wherein the first corridor (24) and the second corridor (26) intersect in a region (28) in which a collision of the first and the second ammunition constitutes a risk for a carrier platform (20) of the weapon system. The interrupter unit (36) is designed to prevent firing of the second weapon (22b) when the first weapon (22a) is firing.
