Abstract (en)
[origin: WO2022136756A1] The invention relates to a method and devices for identity and location verification and to a method and devices for managing access requests. A first verification (S4) relating to a location of a caller is carried out by a terminal upon receipt of a code received by the terminal via at least one short-range telecommunication channel. A second verification (S6) relating to an identity of the caller is also triggered and carried out by the terminal. After these two verifications, an output signal is sent (S8) to an access management platform in order to trigger a requested access.
