Abstract (en)

A method of producing a tobacco material, including a step of impregnating a tobacco raw material with a medium in the state selected from the group consisting of gas, liquid, and supercritical states or thus a step of obtaining a tobacco material having a surface migration rate X of more than 1 defined as surface migration rate $X = S/P$, where S is a GC peak area for a flavor component present on the surface of a tobacco raw material after impregnation, and P is a GC peak area for the flavor component present on the surface of the tobacco raw material before impregnation.
