Abstract (en)
The present invention concerns a door actuator (1) for opening and/or closing a door, comprising a housing (2) with a housing wall (3), the housing wall (3) enclosing a central inner space (4), the central inner space (4) accommodates hydraulic fluid and an actuating mechanism (5) for actuating the door, and at least one volume compensator (6), wherein each volume compensator (6) comprising a separate chamber (10) formed in the housing wall (3), a fluid compartment (11) within the chamber (10), the fluid compartment (11) being fluidly connected to the central inner space (4), an enclosed gas compartment (12) within the chamber (10), and a separator (14) separating the fluid compartment (11) from the gas compartment (12), the separator (14) being displaceable to vary the volume of the gas compartment (12) in dependence on the pressure in the fluid compartment (11).
