Abstract (en)

Method for controlling a throttle valve of an internal combustion engine, the valve comprising an electric actuator for controlling a position of a shutter and a position sensor for detecting the position of the shutter, the method comprising a step of controlling said actuator by means of a cascade control scheme comprising an inner control loop and an outer control loop, so as to generate a control signal (V_{act}) given by the difference between a proportional contribution and an integral contribution, wherein the proportional contribution ($P\omega * e_{vel}$) is a function of the signal generated by a controller (C1) of the outer loop and wherein the integral contribution (C_{stim}) is a function of at least a position estimation error (e_{stim}) between an estimated position (pos_{stim}) by means of an estimator and a measured position (pos_{mis}) by means of the position sensor.
