Abstract (en)

A kit (100) for the identification of a newborn, comprises: a first recognition element (1), wearable by the mother of the newborn; a second recognition element (2), wearable by the newborn. The first and/or the second recognition element (1, 2) each include: a respective contact surface (11, 21), configured to come into contact with the mother of the newborn and/or the newborn; a respective information surface (10, 20), opposite the contact surface (11, 21) and facing the outside. The contact surface (11) of the first recognition element (1) and/or the contact surface (21) of the second recognition element (2) include at least one respective uneven portion (A1, A2), protruding or recessed relative to the corresponding contact surface (11, 21).
