Abstract (en)
[origin: WO2022146762A2] An attachment for a hair dryer that is movable between a first position and a second position in order to alter one or more characteristics of the airflow therethrough. In one embodiment, an internal sliding element is movable within an outer housing in order to alter the internal flow paths inside the housing. In a second embodiment, movable arms cause changes to the shape of an outer housing made of a flexible and resilient material. Motion of the arms between positions causes a change in the shape of the attachment outlet.
