Abstract (en)  
[origin: WO2022144245A1] The present invention relates to a device for combined display of data relating to at least one blood treatment machine and data relating to at least one water-conditioning apparatus, the device comprising a control unit that is programmed to consolidate different data formats of the data relating to the at least one blood treatment machine and the data relating to the at least one water-conditioning apparatus and preferably programmed to integrate the data and display said data together, as a result of which a user receives notifications in respect of an optimized operation of the at least one blood treatment machine and/or the at least one water-conditioning apparatus. Furthermore, the present invention relates to a corresponding method.
