Abstract (en)

[origin: WO2022147498A1] A subcutaneously implantable device includes a clip that is configured to anchor the subcutaneously implantable device to a muscle, a bone, and/or a first tissue, and a first prong with a proximal end secured adjacent to the clip and a distal end extending away from the clip that is configured to contact an organ, a nerve, and/or a second tissue. A first electrode on the first prong is configured to contact the organ, the nerve, and/or the second tissue. A cable is conductively coupled to the first electrode, wherein the cable is configured to be connected to a remote device to electrically couple the subcutaneously implanted device to the remote device. The remote device is a pacemaker device or a defibrillator device positioned inside of a patient's body.
