Abstract (en)

[origin: WO2022148656A1] According to an example aspect of the present invention, there is provided an apparatus, comprising means for transmitting an inactive state measurement request to a user equipment, to request the user equipment to perform at least one positioning measurement in an inactive state and to transmit an inactive state measurement report upon switching from the inactive state to a connected state, means for receiving the inactive state measurement report from the user equipment, wherein the inactive state measurement report comprises information about the at least one positioning measurement performed by the user equipment when the user equipment was in the inactive state, means for generating, based at least on said information about the at least one positioning measurement performed by the user equipment, a mobility profile of the user equipment and means for transmitting the mobility profile of the user equipment to a base station serving the user equipment.
