Abstract (en)
[origin: EP4276370A1] An evaporative air cooling tower includes a housing, a fan at least partially disposed within the housing, and a drawer at least partially disposed within the housing. The drawer includes a liquid tank configured for storing liquid and receiving an ice pack and a pump therein. The evaporative air cooling tower further includes a hose connector positioned adjacent to a top portion of the housing and a first hose disposed within the housing. The first hose includes a first end connected to the pump and a second end connected to the hose connector, such that the pump is configured to pump the liquid stored in the liquid tank to the hose connector through the first hose.
