Abstract (en)  
[origin: WO2022152696A1] A vapour generating article comprising: a main body having a first end and a second end opposite the first end, the body arranged to contain a vapour generating material; a filter having a first end arranged as a mouthpiece portion and a second end opposite the first end arranged for attachment to the first end of the main body; an air inlet portion located at the second end of the filter, the air inlet portion comprising at least one aperture to allow ambient air to enter the filter; wherein the filter comprises an adjuster configured to move relative to air inlet portion to adjust the cross-sectional area of the aperture to alter an airflow through the aperture; wherein the second end of the filter is releasably attachable to the first end of the main body.
