Abstract (en)
[origin: WO2022152489A1] The invention relates to a device (1) with a mounting plate (2) and an object (4) in order to hang the object (4) on a vertical wall. The invention is characterized in that the device (1) for hanging on the wall additionally has first (51) and second (52) adhesive strips which can be removed by pulling, whereby a self-adhesive device (1) is provided by means of the mounting plate (2), the object (4), and the first (51) and second (52) adhesive strips. The mounting plate (2) is designed such that the mounting plate (2) can be temporarily aligned and fixed on the wall by means of the first adhesive strip (51) such that a direct first adhesion of the second adhesive strip (52) onto suitable specified positions on the wall is facilitated and a second adhesion of the aligned mounting plate (2) onto the second adhesive strip (52) adhered to the wall is facilitated. The mounting plate (2) is designed to be mechanically coupleable to the object (4).
