Abstract (en)

[origin: WO2022155583A1] Various implementations relating to a multi-function device legal claim blockchain are described herein. In one implementation, a method may include receiving claim attribute data from users for legal claims, where a respective legal claim corresponds to a compensation claim by a respective user, and where the claim attribute data for the respective legal claim includes data corresponding to a legal claim type for the respective legal claim, a monetary value for the respective legal claim, or combinations thereof. The method may also include receiving device data for the legal claims from at least a subset of the users, where the device data for the respective legal claim includes data corresponding to locations associated with the respective legal claim. The method may further include generating legal claim blockchain databases based on the device data, where the legal claim blockchain databases are configured to store the device data.
