Abstract (en)

[origin: WO2022152778A2] The invention relates to a method for aligning a 3D model of an object with an image comprising at least a portion of said object, said method comprising the following steps: defining (12) a capture position of the image; displaying (15) the 3D model simulated from said capture position; identifying (16) remarkable edges in the 3D model, said remarkable edges having the same reference orientation; selecting (17) an edge among the identified remarkable edges from the displayed 3D model; displaying (18) the image captured by the camera; identifying (20) lines of interest in the image captured by the camera, said lines of interest having an orientation identical to said reference orientation; selecting (21) a line, among said lines of interest, corresponding to the selected edge; and aligning (22) and/or transforming the 3D model so that the selected edge matches with the selected line.
