Abstract (en)

[origin: WO2022152371A1] The invention relates to a haptic button assembly, comprising a housing, at least one button held in the housing and apt to be moved in the activation direction, at least one elastomeric dome shaped member disposed beneath the button having an activating surface, wherein the elastomeric dome shaped member normally maintains an extended equilibrium position and buckles, while the button is pressed contributing to the tactile response of the button, and an electric switch corresponding to said button and cooperating with said activating surface.
