Abstract (en)

A loading apparatus for a round baler for loading a roll of binding material on the round baler is disclosed comprising a binding material support displaceable about a first end between a storage position and a transfer position, in which when in the storage position a first end of the binding material support is raised relative to a second end of the binding material support and when in the transfer position the first end of the binding material support is lowered relative to the second end of the binding material support.
