Abstract (en)  
The present invention relates to a surgical head positioning device for use with a body support, comprising: a head rest configured to support a head of an essentially reclined patient's body resting on the body support; a base; a height adjustment means configured to adjust the height of the head rest relative to the base, while essentially maintaining the angular orientation of the head rest relative to the base; a shifting means configured to shift the head rest relative to the base along a shifting axis, the head positioning device being configured to be arranged with the shifting axis parallel to a longitudinal body axis of the patient.
