Abstract (en)
The detachable skateboard assembly comprises a base part (1) configured for detachable attachment to a board (100) and an upper part (2) configured for detachable attachment to the base part (1). The upper part (2) is coupled to the base part (1) in such a way that they can pivot relative to each other about a first pivoting axis A1. The assembly further comprises a wheel unit (40, 60) configured for attachment to the upper part (2) and an elastomeric element (20) arranged between the base part (1) and the upper part (2) such that the elastomeric element (20) is compressed by the pivoting movement between the upper part (2) and the base part (1). The elastomer element (20) exerts a force tending to make the upper part (2) and base part (1) to recover a neutral position corresponding to the rectilinear displacement of the skateboard.
