Abstract (en)
The invention relates to a saddle tree (10) for a horse-riding saddle for a rider and applicable to an equine. In particular, such a saddle tree (10) comprises a frame (11) apt to rest on the back of said equine and having:- a first posterior portion (12) pointing in the direction of the tail of the equine;- a second front portion (13), opposite the first portion (12), and such as to be, when in use, in contact with the rider. In addition, advantageously, between the first portion (12) and the second portion (13) there is a central reticulated portion (16) for the rider's seat, such that the rider's load on the equine is reduced overall.
