Abstract (en)
[origin: WO2022157335A1] A system for a counter current swimming pool, the system comprising a counter current swimming device; a processing device; a detection device, and a light output signal module; wherein the processing device is configured to, during operation of the system: obtain a signal representing a swimmer's position from the detection device; cause the counter current device to adjust a water output of the counter current swimming device based on the swimmer's position; and cause a light output of the lighting device to change based on the swimmer's position.
