Abstract (en)
[origin: WO2022157363A1] The invention relates to a pipetting device with a touchscreen and to a system comprising said pipetting device. According to the operating concept of the pipetting device, values of pipetting parameters can be set by the user on at least one input screen page, an actuation of the actuation element results in the display of an output screen page and the initiation of a pipetting process defined according to the pipetting parameters, and contacting a separate input field of the output screen page leads back to an input screen page.
