Abstract (en)
[origin: WO2022157035A1] The invention relates to a composite pane with electrically controllable optical properties, comprising an outer pane (1) and an inner pane (2) which are connected together via a thermoplastic intermediate layer (3). A functional element (4) with electrically controllable optical properties is integrated into the intermediate layer (3), wherein a securing element (10) is attached to the surface (I, IV) of the outer pane (1) or the inner pane (2) facing away from the intermediate layer (3) in order to reversibly secure a control unit (11), and a control unit (11) is arranged in the securing element (10), said control unit being suitable for controlling the optical properties of the functional element (4).
