Abstract (en)

[origin: WO2022157076A1] An adjusting device (2) for longitudinal adjusting of a vehicle functional module (1) comprises a guide rail (20) which extends along a longitudinal axis (L), an adjusting assembly (21) which can be adjusted on the guide rail (20) along the longitudinal axis (L) and is assigned to the vehicle functional module (1), and a cable assembly (6). It is provided here that the guide rail (20) has a first supporting section (203) which extends along the longitudinal axis (L) and a second supporting section (204) which extends along the longitudinal axis (L), wherein, as viewed along a transverse direction transversely with respect to the longitudinal axis (L), the first supporting section (203) is arranged on a first side of a section of the adjusting assembly (21) and the second supporting section (204) is arranged on a second side of the section of the adjusting assembly (21), and the cable assembly (6) is supported with a first section (620) on the first supporting section (203) and with a second section (622) on the second supporting section (204).
