Abstract (en)

[origin: WO2022157023A1] The present invention relates to a sealing strip for sealing joints between the surfaces of two adjacent components. The sealing strip comprises a main body defining a drainage structure that forms a drainage cavity when provided between the surfaces of the two adjacent components. The drainage structure comprises a top drainage layer having one or more top recesses extending downward in the top surface of the body, wherein each top recess is in fluid communication with a drainage opening in the front surface of the body. Moreover, none of the top recesses are in fluid communication with a drainage opening in the back surface of the body if any. The present invention further relates to a method for sealing joints between the surfaces of two adjacent components.
