Abstract (en)

[origin: WO2022156844A1] The invention relates to a motor vehicle having a motor vehicle lock (1) which is paired with a movable door element and which comprises a locking mechanism (14) consisting of a rotary latch (8) and at least one pawl (15). In an open position of the locking mechanism (14), at least one part of an inlet region (7) for a lock holder can be released. The motor vehicle also has an actuation means (10) which is arranged in the free inlet region (7), wherein the actuation means (10) forms at least one part of an energy power supply of the motor vehicle lock (1).
