Abstract (en)
[origin: WO2022167223A1] The present invention relates to a cooling and/or freezing device having a body and a cooled interior located therein and having two doors which open and close in opposite directions, wherein the doors each have an end face, said end faces facing one another and being adjacent to one another when the doors are closed, wherein a sealing element which has a moveable door seal is arranged on at least one of the end faces, wherein the sealing element has a moveable force deflection element which is connected to the door seal, wherein the force deflection element has a contact region on which a force is exerted by the body when the door is closed, and wherein the force deflection element is arranged such that, when this force acts on the contact region, said force deflection element moves the door seal towards the end face of the other door and/or towards the body.
