Abstract (en)

[origin: WO2022157268A1] Embodiments according to a first and a second aspect of the present invention are based on the core concept of detecting a feature (110a, 450, 460) of an object (110, 400), which includes: flying over the object and detecting at least a part (110b) of the object by means of a recording unit (130) using a first resolution and, for the regions of the object which have the feature, providing recordings using a second resolution which is higher than the first resolution.
