Abstract (en)
The present invention relates to a wet-laid nonwoven fabric sheet configured to contain at least three types of thermoplastic fibers having different fiber diameters, wherein the fiber diameter ratio (R/r) of the fiber diameter R of the fiber having the largest fiber diameter to the fiber diameter r of the fiber having the smallest fiber diameter is $30 \leq R/r \leq 150$, the average pore size is 0.10-15 μm , and the maximum frequency in the pore size distribution is 70% or more.
