Abstract (en)  
A control method of an information processing apparatus capable of communicating using a first communication method and communicating using a second communication method, the control method comprising: performing a search for a communication apparatus on a network using the first communication method; performing, by using the second communication method, predetermined communication for establishing a connection with the communication apparatus using the first communication method, based on not finding the communication apparatus on the network using the first communication method; obtaining information about a capability of the communication apparatus via the connection with the communication apparatus using the first communication method, the connection being established by the predetermined communication; accepting, after obtaining the information about the capability of the communication apparatus, a communication instruction from a user for communicating predetermined data; and communicating the predetermined data with the communication apparatus via the connection established with the communication apparatus using the first communication method in a case that the communication instruction is accepted.
