Abstract (en)

[origin: WO2022199994A1] The invention relates to a method for ascertaining control data for a gripping device (120, 122) for gripping an object (200, 210, 220, 300, 310), having the steps of: - capturing an image (132) of the object (200, 210, 220, 300, 310), - determining at least one object parameter (202, 212, 222, 302, 312) of the captured object (200, 210, 220, 300, 310), and - ascertaining control data for a gripping device (120, 122) in order to grip the object (200, 210, 220, 300, 310) at at least one gripping point (205, 215, 225, 305, 315), wherein the process of ascertaining the at least one gripping point (205, 215, 225, 305, 315) of the object (200, 210, 220, 300, 310) is carried out using information relating to at least one possible stable position of the object (200, 210, 220, 300, 310), and the possible stable position of the object is designed such that all of the position data of the object that can be converted into one another by means of a movement and/or rotation about a surface normal of a support surface on which the object lies are assigned to the possible stable position.
